SUMMARY

Software engineer with experience across frontend, backend-for-frontend, APIs, enterprise data, observability, and security. Translated provided designs into functional web experiences and built reusable components, collaborating with design and engineering teams. Adaptable across codebases and tools, with a focus on practical software solutions, Agile delivery, and AI-assisted development.

EXPERIENCE

Acuity Inc. — Software Engineer

Information Technology Leadership Program | July 2024 – July 2026

Rotational software engineering role across enterprise data, manufacturing platforms, frontend/BFF applications, and rapid web prototyping

- Implemented responsive, interactive web prototypes for the Peerless Lighting rebrand, translating designs from design engineers into functional interfaces using Astro, JavaScript, HTML, and CSS
- Delivered working prototypes for leadership presentations throughout the rebrand, supporting stakeholder review of evolving designs
- Built and documented reusable UI components with Storybook as part of broader UX and frontend development work
- Built and enhanced React user interfaces and backend-for-frontend integrations, incorporating REST API data into internal application features
- Collaborated with product owners and cross-functional teams in Agile development, using Git, GitHub, and Azure DevOps for code collaboration and work tracking
- Used GitHub Copilot, Claude, and Codex for implementation, debugging, refactoring, and documentation while reviewing and validating generated code
- Developed AI-assisted security remediation workflows using Snyk, Aqua, structured instruction files, and MCP integrations with Azure DevOps
- Contributed to enterprise data migrations and manufacturing application improvements, and created Power BI and Grafana dashboards using Application Insights telemetry

Amdocs — Software Engineer Intern

May 2022 – Aug 2022

- Supported backend service development using Java and Spring Boot
- Consumed APIs and processed returned data for application use
- Built HTML and CSS email templates for notification systems
- Managed work items using Jira in an Agile environment

SKILLS

Frontend & Web: JavaScript, React.js, Astro, HTML, CSS, Storybook

Backend & APIs: Java, C#, REST APIs, Cosmos DB

Data, Observability & Security: Power BI, Grafana, Application Insights, Snyk, Aqua

Engineering Tools: Git, GitHub, Azure DevOps, Jira, VS Code

AI-Assisted Development: GitHub Copilot, Claude, Codex, MCP integrations

Collaboration: Agile delivery, Product Owner collaboration, Figma design handoff, cross-functional teams

EDUCATION

B.S. Computer Science

Georgia State University — 2023
