SUMMARY

Software engineer with experience contributing across frontend, backend-for-frontend, APIs, data, observability, security, and manufacturing systems. Comfortable moving between technical areas, learning unfamiliar codebases and tools, and delivering practical solutions in Agile environments. Hands-on experience with React.js, Astro, Storybook, REST APIs, GitHub workflows, and AI-assisted development using GitHub Copilot, Claude, and Codex.

EXPERIENCE

Acuity Inc. — Software Engineer

Information Technology Leadership Program | July 2024 – Present

Rotational software engineering role across enterprise data, manufacturing platforms, frontend/BFF applications, and rapid web prototyping

- Contribute across multiple engineering environments, adapting to unfamiliar codebases, tools, and business domains throughout four technical rotations
- Built and enhanced React user interfaces and backend-for-frontend integrations for internal applications, incorporating API-driven data into production features
- Build responsive pages and reusable components with React.js and Astro for an NDA-protected website prototype, delivering several features and pages each week
- Translate designer-provided Figma layouts and visual references into functional web pages and features, documenting reusable components in Storybook
- Collaborate with Product Owners and cross-functional partners to clarify requirements, review progress, and iterate on features
- Use GitHub Copilot, Claude, and Codex to support implementation, debugging, refactoring, and documentation while reviewing and validating generated code
- Developed AI-assisted security remediation workflows using Snyk, Aqua, structured instruction files, and MCP integrations with Azure DevOps
- Contributed to manufacturing application improvements and data migrations, and created Power BI and Grafana dashboards using Application Insights telemetry
- Manage source control, code collaboration, and work tracking using Git, GitHub, and Azure DevOps

Amdocs — Software Engineer Intern

May 2022 – Aug 2022

- Supported backend service development using Java and Spring Boot
- Consumed APIs and processed returned data for application use
- Built HTML and CSS email templates for notification systems
- Managed work items using Jira in an Agile environment

SKILLS

Frontend & Web: JavaScript, React.js, Astro, HTML, CSS, Storybook

Backend & APIs: Java, C#, REST APIs, Cosmos DB

Data, Observability & Security: Power BI, Grafana, Application Insights, Snyk, Aqua

Engineering Tools: Git, GitHub, Azure DevOps, Jira, VS Code

AI-Assisted Development: GitHub Copilot, Claude, Codex, MCP integrations

Collaboration: Agile delivery, Product Owner collaboration, Figma design handoff, cross-functional teams

EDUCATION

B.S. Computer Science

Georgia State University — 2023
