SUMMARY

Software engineer with experience contributing to web applications across frontend, backend-for-frontend, data, and UX environments. Comfortable building production-ready features, integrating APIs, and working in Agile teams. Focused on improving development efficiency and consistency through AI-assisted workflows and developer tooling.

EXPERIENCE

Acuity Inc. — Information Technology Leadership Program

July 2024 – Present

4 six-month rotations across enterprise data systems, manufacturing platforms, frontend/BFF applications, and UX prototyping

- Remediated security vulnerabilities using Snyk and Aqua, developing a spec-driven AI-assisted workflow using structured instruction files (e.g., SKILL.md) and MCP tool integrations to improve efficiency and consistency
- Used MCP integration with Azure DevOps to retrieve, update, and execute against work items, enabling a task-driven AI-assisted development workflow
- Contributed to development and maintenance of multiple internal web applications used across the organization
- Built and enhanced UI functionality using JavaScript and React, integrating API-driven data into production features
- Worked across frontend and BFF layers to improve application usability and data flow
- Implemented Figma designs into responsive, production-ready UI using Astro, delivering multiple features per week in an NDA-constrained environment
- Built and documented reusable component libraries with Storybook to improve consistency and development speed
- Contributed to data source migrations and system improvements within manufacturing-related applications
- Developed dashboards using Power BI and Grafana, visualizing Application Insights telemetry for monitoring and decision-making
- Managed work items using Azure DevOps in an Agile environment

Amdocs — Software Engineer Intern

May 2022 – Aug 2022

- Worked with Java and Spring Boot to support backend service development
- Consumed APIs and processed returned data for application use
- Built HTML/CSS email templates for notification systems
- Managed work items using Jira in an Agile environment

SKILLS

Frontend: JavaScript, React, HTML, CSS

Backend: Java, C#, REST APIs, Cosmos DB

Data: Power BI, Grafana, Application Insights

Design & UX: Figma, Astro, Storybook

Tools: Git, GitHub, Azure DevOps, Jira, VS Code

AI Tools: GitHub Copilot, Claude, MCP integrations

EDUCATION

B.S. Computer Science

Georgia State University — 2023
